Profile

I'm a very interested and motivated 2nd year computer science student, with a particular interest in cross-platform development, financial markets, and the running and management of startup/the startup community in general. I have worked with many clients as a freelance developer, on such projects as simple PDF scripting, through to building an app to monitor the status of a clients servers. I am a lover of travel, with one of my best experiences being the month I spent in Borneo, living and working with a local tribe, restoring their village.
